

# Farm Triage

## Developed by Farm Specialist Energy Consultants

Many farms assume their energy is set up correctly. But when we review it in detail, we often uncover things that have simply been left unchecked.

Farm Triage is our structured review to make sure your farm's energy is set up properly.

We focus on three outcomes:

- ✓ **Reducing unnecessary charges**
- ✓ **Improving contract structure**
- ✓ **Future-proofing your farm's energy setup**

It helps reveal hidden savings, simplify how your farm's energy is structured, and improve efficiency across the whole setup.

This review is the foundation of how we work. We don't just reduce rates, we look at everything that affects your farm's energy from top to bottom.

### Climate Change Levy Check (CCL)

- Avoid overpaying environmental taxes
- Confirm eligibility for exemptions or reductions
- Keep your bills compliant and accurate

### Kilovolt-Ampere Levels Check (KVA)

- Only pay for the power your farm actually uses
- Optimise capacity to suit buildings and equipment
- A smarter setup that fits how your farm operates

### Eliminate Estimated Bills

- Use smart meters or regular readings
- Ensure billing reflects real farm usage
- Remove the risk of overpaying

### Co-Terminus Contracts

- Align contract end dates across farm buildings
- Simplify renewals and forward planning
- Reduce admin across your energy contracts

### Advance Future Market Tracking

- Secure the best rate at the right time
- Stay ahead of market price increases
- Rely on expert timing for renewals

### Targeted Charging Review Check (TCR)

- Prevent unfair capacity-based network charges
- Align costs with your farm's actual supply capacity
- Manage rising standing charges more effectively

### Correct VAT Levels

- Benefit from lower VAT if your farm is eligible
- Reclaim overpaid charges with ease
- Keep your energy costs tax efficient

### Line Loss Factor Charge Check (LLF)

- Reduce your unit rate by improving efficiency
- Cut hidden distribution costs
- Pay less without changing how you use energy

### Making Your Farm Green

- Green energy technology opportunities
- Green gas and electricity tariffs
- Available grants and expected project pricing
- Build a practical energy strategy for your farm
- Improving efficiency while lowering emissions
- Meeting sustainability targets while controlling costs

## What It Means for Your Farm

### Pay the Right Amount for Energy

Make sure your farm isn't paying for unnecessary charges or the wrong tariffs.

### Simpler Energy Management

Spend less time dealing with contracts and admin, and more time running the farm.

### A Clear View of Your Energy Setup

Understand where your energy costs are coming from and what could be improved.

### Future-Ready Greener Energy

Prepare your farm for changing energy prices, new technology and new regulations.

## Why Pay More Than You Should?

If any of the following sound familiar, Farm Triage could help uncover where your farm may be overpaying.

- ✓ You're not sure if your farm is on the correct VAT rate
- ✓ You've never checked your farm's electricity capacity
- ✓ You're still receiving estimated energy bills
- ✓ Contracts across buildings renew at different times
- ✓ Your farm's energy setup hasn't been reviewed in years

## Start Saving with Farm Triage

If you want to move beyond simply chasing lower prices, Farm Triage helps make sure your farm's energy is set up properly.

No add-ons. No hidden fees. Just a practical review to make sure you're not paying more than you should.
